DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 26, 2006 has been entered.

EXAMINER'S AMENDMENT

2. In view of allowable subject matters, the Applicant's representative was contacted for canceling the withdrawn nonelected claims.
3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Timothy Schaeberle on November 27, 2006.

The application has been amended as follows:

The claims 66 – 96 and 113 – 128 have been cancelled.

In claim 97, line 12, following the letter G, the “;” was deleted.

In claim 135, line 12, following the phrase “... concentration is”, the word “operable” was deleted and - - operable - - was inserted.

Allowable Subject Matter

4. Claims 97 – 112 and 129 – 144 are now allowed.

5. The following is an examiner's statement of reasons for allowance:

Claims 97 – 112 and 129 – 134 recite, inter alia, a semiconductor – on – insulator layered structure comprising a substantially single – crystal semiconductor material (material S) and an oxide glass or an oxide glass – ceramic which comprises positive ions (material G), wherein at least a part of the structure comprises in order:

material S;

material S with an enhanced oxygen content;

material G with a reduced modifier positive ion concentration;

material G with an enhanced positive ion concentration of modifier positive ions, including at least one alkaline earth modifier ion from the material G with a reduced positive ion concentration; and

material G.

The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claims 135 – 138 recite, inter alia, a semiconductor – on – insulator layered structure comprising a substantially single – crystal semiconductor material (material S) and an oxide glass or an oxide glass – ceramic which comprises positive ions (material G), wherein at least a part of the structure comprises in order:

material S;

Art Unit: 2891

material S with an enhanced oxygen content;

material G with a reduced modifier positive ion concentration;

material G with an enhanced modifier positive ion concentration; and

material G;

wherein the material g with the reduced modifier positive ion concentration is operable to inhibit ion re – migration from the material G into the material S. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claims 139 – 144 recite, inter alia, a semiconductor – on – insulator layered structure comprising a first layer of substantially single – crystal semiconductor material, a second layer of substantially single – crystal semiconductor material with an enhanced oxygen content located on the first layer and a substrate of an oxide glass or an oxide glass – ceramic having: (i) a first substrate layer adjacent the second layer of substantially single – crystal semiconductor material, the first substrate layer having a reduced positive ion concentration in which substantially no modifier positive ions are present, and (ii) a second substrate layer adjacent the first substrate layer and having an enhanced positive ion concentration of modifier positive ions, including at least one alkaline earth modifier ion. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Conclusion

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
